Let's Be Clear

Daavlin Phototherapy Solutions for Psoriasis and Vitiligo

7 Series is the **Clear Solution** for full-body light therapy. 7 Series is flexible, powerful and advanced.

Daavlin 7 Series • Flexible • Powerful • Advanced

Daavlin delivers a clear solution for psoriasis, eczema, and vitiligo... here's how:

7 Series clears your skin

- Light treatments are typically very brief, and occur about three times a week.
- Results vary, but psoriasis symptoms usually begin to show improvement in as little as 6 – 8 treatments; vitiligo commonly begins to re-pigment within about 8 weeks.
- This medical device requires a prescription from your doctor.

7 Series offers flexibility and power

- Units can be equipped with four, six, eight, ten or twelve lamps.
- Four and six lamp models have optional reflective doors. Eight, ten and twelve lamp devices feature doors with lamps that act to double the treatment area.
- 7 Series can accommodate a variety of lamp types, including Narrow Band UVB, Broad Band UVB and UVA and plug into a standard household electrical outlet.

7 Series is technologically advanced

- Special ballasts and uniquely formed reflectors give the 7 Series a high output which ensures that treatment times are brief.
- Units can be equipped with Daavlin's Flex Dosimetry, a control option for measuring power output and assuring proper treatment while at home.
- Advanced options such as the DistanceMinder Patient Positioning Sensor and FlexRx Exposure Limiting Software are available on the 7 Series.

Safe and Easy to Use

Phototherapy is safe for most patients, including those who are pregnant, elderly or immuno-compromised. Protective grid prevents accidental contact with the lamps, and UV blocking eyewear is provided.

An Affordable Choice

Daavlin's home phototherapy units are reasonably priced, frequently covered by insurance and our free insurance processing program does the work for you!
